MASONS
Designed Smart, Built Tough.

UNI[®] PLUS

More than just a building wrap.
It's a game changer!

UNI[®] PLUS Flexible Air Barrier gives early enclosure to builds, allowing work to continue on the inside (for up to 90 days), without waiting for the cladding to be complete. It has the added benefit of being Fire Retardant.

FLEXIBLE AIR BARRIER

No more hold ups due to cladding delays or bad weather. UNI PLUS provides temporary protection from UV exposure to timber framing for up to 90 days from installation.

A SECONDARY LINE OF DEFENCE

Once installed UNI PLUS is a secondary line of defence against moisture over the life of the building. It is highly breathable and passes vapour from inside the building out.

SAVES MONEY

UNI PLUS is much cheaper than Rigid Air Barriers (materials and labour) yet has most of the benefits.

VERY STRONG AND TEAR RESISTANT

UNI PLUS has a high vapour permeable, water resistant membrane sandwiched between two extra heavy duty tough layers of non woven polyolefin fabric.

FULL TRAINING AND SUPPORT

Masons is committed to supporting builders with their first time use of all UNI wall underlays. An installation video, written instructions and training is available.

FIRE RETARDANT

Is fire retardant per AS/NZS 1530.2:1993.

Outside layer - blue

Inside layer - white

Available as

UNI PLUS Roll - 2.74m x 18.25m = 50m²

UNI® PRO Accessories

CN100 UNI Cap Nailer Gun To Fix UNI PLUS to the Frame

Best practice for securing UNI PLUS. This gun shoots plastic caps with a 25mm ring shanked nail, and increases the holding power of the wrap.

A 90-100 PSI Air Compressor is also required.

UNI® Fasteners

Available as:
Galvanised nail and washers for wood frames **for use with a hammer.**

Galvanised nail and washer pack for **wood frames using a UNI Cap Nailer.**

Galvanised screws and washers **for steel frames.**

40 Below Flex Flashing Tape

Our most advanced, high performance flashing tape.

Cutting edge adhesive.

Ultra-thin and pliable.

Nail and screw sealable with just one layer.

40 Below Platinum Flashing Tape

Superb adhesion in all weather conditions from -10°C to 40°C.

No primers or heat guns required.

Ultra-thin and pliable.

Use a scraper to assist adhesion.

BrickTies Heavy Duty Earthquake

Masons BrickTies are manufactured to comply with AS/NZS2699.1.2000.

Medium Duty also available.

Penetration Seals For Pipe Penetrations

Air seal flashings designed for cavity construction where pipes or wires penetrate the air barrier.

Available sizes:
1-75mm and 80-170mm.

Corner Guards For Windows

To use with the installation of Masons 40 Below Flashing Tapes.

PEF Backing Rod Joint Filler

A cylindrical flexible closed cell polyethylene material.

Available in multiple diameters.

UNI[®]PLUS

Applications

- Suitable for commercial and residential construction.
- Absorbent and can be used with all cladding systems.
- Strong and durable and suitable for all areas of New Zealand including up to 'Extra High' wind zones of NZS 3604 using a specific fixing method. (See UNI installation instructions on our website).
- Performs well over timber or steel framing.
- Suitable as a non rigid backing for stucco plaster.
- Suitable as an air barrier on walls that are not lined including gable ends.
- Is fire retardant.

Meets requirements of
NZBC E2/AS1
clauses E2, F2, B2

masons.nz

New Zealand Building Code Standard (NZBC)

If designed, installed and maintained in accordance with our requirements, UNI PLUS meets or exceeds the requirements of the NZBC.

Physical Properties

- A heavy duty, rugged, non-woven breathable synthetic Flexible Air Barrier.
- Highly water resistant and designed to provide temporary protection from weather conditions and UV exposure to timber framing without the installation of the cladding, which allows for the continuation of internal work on the house for up to 90 days after installation.
- UNI PLUS comprises three polypropylene layers: two outer layers of non-woven polypropylene with a middle layer of a functional-technical film.

Installation Training

Masons is committed to supporting builders with their first time use of UNI and UNI PLUS. An installation video and printable instructions are available on our website. Please read the instructions carefully and contact us through your Masons Rep to book a training session.

- Masons is a NZ company with over 20 years in the industry
- We are driven to raise the quality of New Zealand building products through innovation and clever thinking
- We have a nationwide team of experts to assist customers using our products
