## Access Doors/Duct Flange – **ACCESSORIES**

## Models: ADC-2, ADH-2 – Access Door.

Galvanised steel frame and double skin panel, insulation filled and fitted with cam-locks both sides (ADC-2), or with hinge pin on one side and cam-locks on the other (ADH-2).

Frame is dove-tailed to provide easy folding tabs, which lock it in to a prepared hole in the duct, or panel.

| Models ADC-2 and ADH-2 Standard Sizes |           |           |           |  |  |
|---------------------------------------|-----------|-----------|-----------|--|--|
| 200 x200                              | 250 x 250 | 300 x 300 | 400 x 400 |  |  |
| 450 x 450                             | 500 x 500 | 600 x 600 |           |  |  |

Other sizes are available to special order.

| Guide Product Weights |                           |  |  |
|-----------------------|---------------------------|--|--|
|                       | Approximate Weight in Kg. |  |  |
| Size                  | ADC-2                     |  |  |
| 250 x 150             | 1.05                      |  |  |
| 300 x 300             | 1.48                      |  |  |
| 400 x 400             | 2.63                      |  |  |

| Minimum Side: | 150 mm  |
|---------------|---|
| Maximum Side: | 600 mm  |
| Cam-locks:    | Up to 300 mm Side, 1 Cam-Lock.<br>Above 300 mm Side, 2 Cam-Locks. |
| Material:     | 0.55 galvanised steel and polyester based insulation.             |

0.55 galvanised steel and polyester based insulation.

## Model: Duct Flange – Flanging System

The Duct Flange Flanging System provides a secure airtight joint for connecting individual duct sections, dampers and other accessories together.

Constructed from roll-formed galvanized steel, in either 25 mm, or 35 mm high by 5.8 m lengths, which can be cut to size on site, by others. All Duct Flange angle incorporates an integral sealant. Matching pressed steel zinc plated corners slide into the roll-formed section to make a rigid, four sided frame. Clips are furnished with these corners to make a simple and secure fixing. (Bolt holes are provided, which can be used for aligning the corners, or for a more secure fixing. Nuts and Bolts by others). Do **not** use bolts for Fire Damper Breakaway Joints.

The raw edge of the duct end slides fully into the open roll-formed section of the flange and its mastic sealant. It should then be held in place by either spot welds, or self drilling Tek screws. Duct Flange DM Seal Gasket Tape should be applied to the face of the flange and the corners of the mating flange.

Simple 'J' Cleats should be installed, which snap over the frame to secure and seal two pieces of Duct Flange together.

The recommended minimum spacing of snap on 'J' Cleats is shown in the following table:

| Description | Part No. | 0.5 kPa | 1.0 kPa | 1.5 kPa |  |
|-------------|----------|---------|---------|---------|--|
|             | DF 25    | 450 mm  | 300 mm  | 150 mm  |  |
|             | DF 35    | 600 mm  | 450 mm  | 300 mm  |  |

The following figures use SMACNA Duct Construction Standards recommendations. They provide a guide to flanged joint limitations using 0.8 mm flange wall thickness, without intermediate reinforcement, or internal bracing.

The Maximum Duct Size can be increased by altering these parameters. Refer to SMACNA.

|                   |          | Maximum Duct Size (W x H mm) |             |             | Gasket |
|-------------------|----------|------------------------------|-------------|-------------|--------|
| Description       |          | Maximum Spacing of Flanges   |             |             | Size   |
|                   | Part No. | 0.5 kPa                      | 1.0 kPa     | 1.5 kPa     | mm     |
| Duct Flange 25 mm | DF 25    | 1200 x 1200                  | 900 x 1200  | 900 x 1200  | 18x6   |
|                   | DF 35    | 1500 x 1500                  | 1200 x 1200 | 1200 x 1200 | 18x6   |

Note: For weight details contact your local Holyoake branch.
