Every industrial building, large or small, needs to keep air circulating and keep temperatures to a comfortable level. Ampelair ventilators are an effective, inexpensive, reliable, maintenance free ventilation solution. Using only the power of the wind they extract staleair and allow fresh air to circulate within the building.

## Suits new installations or replacement Wind driven means no running costs Reliable 10 year warranty Aluminium construction

Fully enclosed Stainless Steel self-lubricating bearings. Also available in powder coated colour finish. Available models: RV500, RV600.

Bases Ampelair ventilators models: RV500 and RV600 are supplied complete with a Variable Pitch - Aluminium base to suit any application.

## Capacity Table

Extraction volume expressed in cubic metres per second. 1 cubic metre $=1000$ litres

The formula and capacity tables are useful guides in determining the model size and number of ventilators required. Building usage and other factors, finally determine the exact requirements for maximum efficiency and the comfort levels required. Ampelite can assist at design or specification stages in this regard.

Dampers Available for 500 mm and 600 mm throat diameter ventilators. Smaller sizes are not widely used but can be supplied against orders. Manually operated. Zincalume® construction.

## Calculations

to decide size and number of Ventilators.

1. Determine the volume of the building

Volume of section $\mathrm{A}=0.5 \times \mathrm{L} \times \mathrm{W} \times \mathrm{Ha}$
Volume of section $B=L \times W \times H b$
Total building volume $=$ volume of section $\mathrm{A}+$ volume of section B .
Note: For factories, the combined volume $A+B$ should be used.
Where Volume B is air-conditioned, only Volume A is used to calculate the number of ventilators required. No air should be drawn from the airconditioned space below ceiling level.

2. Select the number of ventilators required

METRIC $=\mathrm{V} \times \mathrm{Ac} / \mathrm{Hr}$
EX/c $\times 3.6$
Where:
$\mathrm{V}=$ Volume of building or roof space
$\mathrm{Ac} / \mathrm{Hr}=$ Air changes per hour
$\mathrm{EX} / \mathrm{c}=$ Exhaust capacity of ventilator

| Building <br> Type | Recommended Air <br> Changes per Hour |
| :--- | :---: |
| Warehouses | 4 to 8 |
| Factories \& Workshops | 5 to 10 |
| Gyms, Tennis \& Squash Courts | 7 to 10 |
| Assembly Halls, Garages | 10 to 15 |
| Toilets | 12 to 15 |
| Laundries | 20 to 40 |
| Stables, Piggeries \& Poultry | 20 to 50 |
| Bakeries, Boiler Houses | 30 to 40 |
