Different type of fixings

There are three different types of fixing arrangements:

- ▶ Type 1 is for fixing **into** an opening in the wall
- ▶ Type 2 is for fixing in front of an opening in the wall
- ▶ Type 3 is for fixing **within** a recess

The installation of FR + FS guide rails onto the building structure must be done with approved fasteners. Areas prone to leakage must be sealed with A2 - rated materials.

For the fastening of guides profiles, two variants of screws are supplied (round head screw and hex bolt).
