

## IN HOUSE PROCESS

PSP are proud to supply ALPOLIC® to the New Zealand market; a company who are committed to reducing their impact on the planet and increasing sustainability in their manufacturing and post manufacturing processes. All materials used in ALPOLIC® products are 100% recyclable and newly established, purpose-built recycling plants have been set up to help with this goal.

ALPOLIC® have established specifically designed recycling facilities to collect and reuse any scrap materials from the manufacturing process. This facility in Japan is an industrial scale processor that has been certified by the Japanese Environmental Minister. These facilities are currently at their plants in the US, Germany and Japan, but the aim is to have these available at all sites worldwide.

The process of these recycling facilities are as follows:

- Collection of scrap waste, which is then sorted into item category
- Separation of metals and core materials
- Core materials are then shredded into minute pieces to be reused
- Metals and core materials are returned to the manufacturing process

PSP are also committed to reducing our environmental footprint, so are pleased to be partnered with organisations such as ALPOLIC® who are also focused on this.
