ABOUT ELITEFENCE

The new modular aluminium fencing kit with a patented no weld system is now available in New Zealand. The simple push together system makes it quick to install with no welding or screwing required, providing that flawless look. Slats can be easily adjusted with the 9mm Spacer Blocks included in the Slat Box or 20mm Spacing Blocks sold separately. Desired widths and heights can also be easily cut to size on site. Available in a range of contemporary powder coated colours, we believe there is one that will be ideal for your next outdoor and landscaping project.

Converting your EliteFence to a Louvre is easy with EliteFence Louvre Brackets (sold separately in pairs). **Note:** Gate Kits cannot be converted to Louvre.

EliteFence utilises a patented side frame that applies tension to hold slats in place.

Screw bottom end cap to the side frame. Remove the Side Frame internal insert (if applicable) and fix the side frames to a existing wall or a EliteFence Post (fixings not included).

Add slats either by diagonally inserting or pushing slats from top of side frames down.

Add spacers between each slat in desired orientation to vary slat spacing. Repeat process to install remaining slats. Simply click in slats with no screwing required.

Screw top end cap to the Side Frames. Finish the Posts by placing on the Top Caps.
