

MANROSE®

Proven Reliable Ventilation Solutions

LOW VOLTAGE FANS & KITS

FOR INSTALLATION IN DAMP AREAS, ZONES 1, 2, 3

Manrose Low Voltage Fans are suitable for installation within shower cubicles or within the splash area of a bath or laundry tub - where current regulations prevent the use of conventional fans.

These fans are powered by a SELV (Safety Extra Low Voltage) isolating transformer which converts the mains supply to 12 Volts. Manrose Low Voltage Fans can be used within Damp Zones 1, 2, or 3 and come in a range of sizes to suit shower rooms, bathrooms or ensuites.

Able to be positioned right where steam/moisture is produced, they can achieve optimal extraction.
